

PALANTIR NOTES

GENERAL OVERVIEW OF PALANTIR

- Palantir Technologies Inc. specializes in software for large data analysis with applications in the military and civilian life.
- Palantir primarily sells to Governments (abroad, federal, and local) and large corporations including hospitals, airlines, and tech companies.
- Has four main platforms (*although more specialized products exist*):
 1. Palantir Gotham (*big data analysis for governments; spy software*)
 2. Palantir Foundry (*big data analysis for companies*)
 3. Palantir Apollo (*dev ops but special somehow*)
 4. Palantir AIP (*spy software for the military*)
- Founded in 2003 by Stephen Cohen, Alex Karp, Joe Lonsdale, and **Peter Thiel** (*ghoul; wannabe emperor*)¹

PALANTIR GOTHAM

WORLD 'S BEST SPY SOFTWARE

Gotham is a platform designed by Palantir primarily for government agencies (*particularly those in the intelligence community and in the military*) as these agencies often have a large volume of disparate and wide-ranging pieces of intelligence. Where before Gotham, it could potentially take weeks or months to sort through all the different documents, satellite images, signals, text messages, metadata, etc. and find a common link between them. Gotham changes this by using artificial intelligence along with normal data analysis techniques to catalog, label, and search for patterns in the data. It is reportedly very good at this and can often find links between two pieces of intelligence that wasn't apparent on first viewing. Another big innovation of the Gotham platform is how it shows these connections in an intuitive manner.²
